

Forgues Eyecare & Associates

Optos® ultra-widefield retinal imaging

Forgues Eyecare & Associates is proud to provide Optos®, a state-of-the-art, quick, non-invasive scan, which allows your eye doctor to study the inside of your eye without dilation. **The images captured will allow your doctor to evaluate your eye and retina to ensure that there are no signs of macular degeneration, retinal holes, retinal detachments, diabetic complications, hypertension/high blood pressure complications, and/or cancers.**

Early detection is crucial, therefore, Optos® is strongly recommended for all patients as a screening tool for pathology. Under some circumstances dilation may still be necessary.

Optos® imaging is covered by a fee of \$39, which may be self-paid at your appointment with cash, check, credit card, FSA or HSA.

- ☐ Yes, I would like to have Optos® imaging at my appointment.
- ☐ No, I am declining Optos® imaging and acknowledge that dilation may be used.
